QTY PER OUTER PACK	120	200
GROSS WEIGHT NOMINAL	10.35kg	12.65kg
MAXIMUM NEQ	0.163kg	0.273kg
PROPER SHIPPING NAME	Cartridges for weapons, inert projectile	
UN SERIAL NUMBER	0012	
HAZARD CLASS	1.4S	

Methods of Use

For use in pump action shotguns (these rounds have also been tested in a limited number of semi automatic shotguns successfully), these cartridges are designed for rapid deployment against an aerial drone threat.

Description

The DB-5 is a 12 gauge anti drone munition to be deployed against an aerial drone threat with a range of up to 75 metres from the point of fire.

Performance/Safety

These cartridges should be fired through a proofed, unchoked 12G shotgun. This munition is designed to minimise collateral hazards beyond the point of engagement.

The projectile may travel in excess of the range and this must be taken into consideration by the user, knowing what is beyond the engagement target.

Warning: The round should only be used by individuals trained in the proper use of firearms. Serious injury or death may occur if the product is misused or used in an inappropriate manner. Persons should not be engaged with this round.

Range Safety Template available on request.

Articles should remain within the original sealed package and be stored within a temperature controlled environment of +5°C to +30°C; relative humidity should not exceed 70%. Storage outside of these conditions will not be warranted and may reduce the shelf life and lead to the articles not functioning as intended.

At Primetake we constantly review our products—all specifications are a guide and may vary so please check that the latest specification meets your requirements
